MICKEY 100. Model performance in its class.

THE MICKEY 100 machine is perfect for manual paving work where elements weigh a maximum of 100 kg. It sucks and repositions paving elements to a designated location, which means you do not need to bend down or work on your knees. The device is powered from a 230 V mains power supply.

Main advantages of MICKEY 100:

- Ability to lift elements weighing up to 100 kg,
- Very compact dimensions and low weight (26 kg – with a suction cup 40x40),
- Ergonomic control system,
- Two options: manual assembly of the machine by two persons or using a trolley by a single person,
- Ability to mount various suction cups.

Benefits from using MICKEY 100:

- Instant suspension of transported elements (1 second to allow suction),
- Precise laying of concrete elements without joints (all side edges remain separate),
- Multitasking – fitting of various concrete elements, e.g. square tiles, as well as narrow curbs,
- The highest operational safety standard compliant with EN 13155,
- No risk of injury, with spine protection.
